\* You can also find more tips and tricks at `www.dummies.com/extras/photoshop`. See Chapter 16 for additional helpful advice on Photoshop. In the next sections, you find out about the major parts of Photoshop. If you want to use Photoshop in a more advanced manner, you need to download the application and learn about the

---

differences between the different tools, options, and features. Part I:  
Starting with an Image

Photoshop's clean interface lets you start with a blank piece of paper and begin creating an image.

You can make changes to the image immediately by using layers to work on different parts of the image simultaneously. Photos are stored in layers. For example, a

---

background layer contains the scenery, and the car engine or a lion's face can be covered with a layer that contains colors. Each layer can be adjusted individually and have its own transparency.

After you import a photo, you have a choice as to where to place it. You can place an imported photo in the default place, where it automatically appears, or you can

---

place it anywhere on the canvas or image you created. See Chapter 9 to view the different ways you can place images. To work with layers and create multiple layers, see Chapter 11. In this part, I get you started by showing you how to import an image, create a canvas, and place your photo in the same location. To get started with your first image, you need to create a

---

new document and place your image. You're ready to get started!

1. Create a new document. 2. Choose File⇒New to create a new document. Use File⇒New to choose a file to open. Files are selected from your computer's desktop or from the Files panel. 3. Click the New Document button at the bottom of the Photoshop window. You see the New

---

Document dialog box, as shown in  
Figure 4-1. **\*\*Figure 4-1:\*\***  
Create a new document or open a  
file for editing. 4. Click the  
Browse button and navigate to a  
location where you want to save  
your file. If you don't see the  
Browse button, click the Options  
button (

Photoshop and Photoshop Elements are available in a variety of editions and price ranges that vary depending on features and selection. To choose the right edition for you, you can check out this comparison table. The level of graphics editing features that you can do in Photoshop and Photoshop Elements depends on

---

your graphics editing skills and your computer capabilities. You can't perform advanced image editing in Elements, so you should use it instead of Photoshop when your editing skills are less advanced. How to use Photoshop Elements Photoshop Elements is easy to use. You open the program, import pictures, change the colors, text and other settings,

---

and save your files. The interface is simple. When you open a file, Elements displays the most important functions and settings.

The following image shows the main interface of Elements: Figure 1: Elements main window Here are the most important functions in the Elements window. Figure 2: Elements main window - tool bar Click the right arrow to open the

---

menus. Figure 3: Elements main window - menus Use these menus to change the appearance of your pictures. Click the image on the left to open the images panel. This panel is where you import, resize and paste pictures, and edit the pixels of your photos. You can also open files in another program that supports the Adobe Photoshop Picture type. Paste and import

---

pictures To paste a picture from your computer, you must first open that picture in Elements. You can paste pictures from any folder on your computer and drag them into the images panel or open them directly by clicking Open or Import. You can copy a picture from another program or paste a picture from another folder, as long as you are in Elements. You

---

must open another program in order to paste images. You can paste pictures from your camera.

If your camera has a Picture Transfer (PTP) capability, you must connect your camera and import the pictures, and then you can paste them to Elements.

Importing pictures You can also import pictures directly from your camera or photo album. The

---

Import button is located at the top of the screen. Importing from your camera If you are using an Android device, the picture settings and messages may cause confusion. For example, the pictures might be missing important information. Make sure to check your picture settings carefully before importing the images to make sure you are

---

making the best choices possible.

Q: Summarizing row data in another row based on one column's id So I'm using a pandas dataframe that looks like the following:

```
import pandas as pd
df = pd.DataFrame({"Date": ['2017-01-01', '2017-01-02', '2017-01-03', '2017-01-04', '2017-01-05', '2017-01-06'], "ID":
```

---

```
['a', 'a', 'a', 'a', 'a', 'a'], "value": [6,  
8, 7, 10, 7, 8]})
```

```
df.set_index('Date', inplace=True)
```

So I basically want to group all the ID's that share the same Date together into one row, like so:

```
value 2017-01-01 6 8 7 10 8
```

```
2017-01-02 2017-01-03
```

```
2017-01-04 2017-01-05
```

```
2017-01-06
```

**MBZ-46** MBZ-46 is a selective muscarinic acetylcholine receptor antagonist that binds to muscarinic receptors with low affinity. It may represent a key to understanding the development of Alzheimer's disease (AD). It also has antinociceptive effects in animal models of pain. References

Q: Is there a way to pick up a given euclidean differential? Given a Riemannian manifold with metric, is there a way to pick up one of the  $\text{d}f$ s in the usual euclidean norm? That is, in a Riemannian

---

manifold is there a Riemannian structure of which differential forms (like  $\text{d}x^1$  and  $\text{d}x^2$ ) are one of the basis  $\text{d}f$ s and which one is the regular (nondegenerate) euclidean norm? A: Let  $U$  be a chart on  $M$ ,  $x \in U$  and let  $(V, x^1, \dots, x^n, y^1, \dots, y^n)$  denote local coordinates on  $U$ . The Riemannian metric

---

induced by the Euclidean metric on  $M$  is given by  $\langle \frac{\partial}{\partial x^i}, \frac{\partial}{\partial x^j} \rangle = \langle \frac{\partial}{\partial y^i}, \frac{\partial}{\partial y^j} \rangle = \delta_{ij}$  If  $g$  denotes the Riemannian metric, then the Riemannian metric induced by the Euclidean metric on the chart  $(U, x^1, \dots, x^n)$

---

is given by  $g = \sum_{i,j} g_{ij} dx^i dx^j$

Using the symmetry of  $g$ , we find the Christoffel symbols

$\Gamma^k_{ij}$

$\Gamma^k_{ij} = \frac{1}{2} g^{kl} \left( \frac{\partial g_{li}}{\partial x^j} + \frac{\partial g_{lj}}{\partial x^i} - \frac{\partial g_{ij}}{\partial x^l} \right)$
